

This week's challenges

Choose **one or two** of these and keep working on them through the week. No AI this week; this is about the capture end of the chain.

Light

- **Recreate a look you like.** Find a film, a show, or a YouTube creator whose lighting you respond to. Freeze a frame and read it: where the catchlights are, which side the key is on, whether there's a rim, hard or soft, warm or cool. Then recreate it as closely as you can, with whatever you have, and shoot the pair: their frame and yours.
- **Build the home studio.** You'll be recording a five-minute reflection video every week this term. Set up the place you'll do it: camera at eye level on the tripod, a key at 2 or 10, something for fill, a back light or a lit wall if you can manage it, the mic close. Record the first one there and look at it against last week's.

Movement

- **Walk and talk.** Practice a walking selfie video with the tripod as a stick: front camera, arm out, knees bent, a minute of talking without stopping. Do it a few times over the week and watch the early ones against the late ones.
- **Borrow a gimbal and follow a performance.** Think of the D in TDM. Find someone doing something that moves, dance, a skateboarder, a musician, someone cooking, and capture it on the gimbal: beside them, behind them, letting them come toward you. Pick the shots where the gimbal is doing something a tripod couldn't.

Chains and experiments

- **Chain modes of capture.** Do what you did at the camera obscura station somewhere else: a phone photographing a projection, a camera looking at its own screen, a picture of a picture of a picture. Keep track of what each stage added.
- **Borrow a lens.** Take one of our lenses out and run experiments with it outside or at home: focus it onto paper or a wall, photograph what lands there, hold it in front of a phone camera. Bring back what you found.

Come back

- **Thursday: studio cameras.** If framing and the studio cameras are what caught you, come back Thursday and practice on them; the two chairs and the shot-size ladder will still be there.
- **The lights are here.** We don't have loads of lights to lend, so if your challenge needs real panels, come work with them in the Lab rather than taking a kit home.

Gear you can borrow

Tripods, the gimbals, the wireless mics, a lens or two, and a small light or reflector while they last. Ask at the end of class or in the class image channel. The desk video kit page is the shopping list if you want your own.

The standing turn-in

The weekly turn-in is still a video: two short tutorials, or two contrasting shots or scenes. Any of the challenges above produces one. Obvious pairs from today: their lighting vs. your recreation; the same

subject through the acrylic vs. straight from the phone; the gimbal walk vs. the handheld walk.
